Make your card deck

94 general cards. Original artwork, arranged for home printing. Choose the PDF that matches your paper: US Letter or A4.

START HERE: PRINT, FOLD, GLUE

1. Open the Fold PDF. Print single-sided, one page per sheet, at 100% or Actual size.
2. Cut along the outside crop marks to make three long strips per sheet.
3. Fold each strip at the join between front and back, keeping both printed sides out.
4. Glue the blank insides together and press flat while drying.

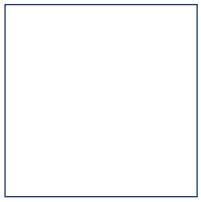
The full deck uses 32 sheets. The final sheet contains one card.

HAVE A TWO-SIDED PRINTER?

Use the Duplex PDF for six finished cards per sheet. Select portrait paper, two-sided printing and Flip on long edge. Keep the file's page order.
Print PDF pages 1-2 as a test first. Hold the sheet to a light: each back should sit behind its matching front. If your printer shifts the two sides, use the Fold file.
The full deck is 32 PDF pages on 16 sheets. Cut at the crop marks after printing.

CHECK YOUR SCALE BEFORE PRINTING THE WHOLE DECK

Print this page at 100% / Actual size and measure the square below. Turn off Fit, Shrink, multiple-pages-per-sheet and booklet settings. Select the matching paper size.



This square must measure
1 inch x 1 inch
25.4 mm x 25.4 mm

Finished card size: 3.5 x 2.5 inches / 88.9 x 63.5 mm.
For fold-and-glue, ordinary paper works; the two glued layers make each card sturdier. For duplex, use card stock your printer supports.

This calibration page is separate from the deck. It is not a cover sheet and should not be inserted into a duplex print job. Original prompts and artwork are unchanged.
